Softa-Man® Hand Sanitiser

For surgical and hygienic hand disinfection

Softa-Man® Hand Sanitiser

For surgical and hygienic hand disinfection

Softa-Man is a ready to use alcoholic solution for surgical and hygienic hand disinfection that has ethanol and n-propanol alcohols combined as active ingredients.

Enriched with high quality skin protectors (dexpanthenol, allantoin and bisabolol) and moisturisers, Softa-Man is suitable for frequent and long term use.

It contains hypoallergenic perfumes, is free of colourants and is conveniently available in a liquid and gel solution.

Ingredients

100 ml solution contains active ingredients: 45 g ethanol, 18 g 1-propanol; Other excipients: Purified water, diisopropyl adipate, PEG-6 caprylic/capric, glycerides, dexpanthenol, bisabolol, fragrance (contains limonene, linalool), allantoin.

Benefits

- Unique two alcohol solution is effective against a broad spectrum of microbes³
- Protects sensitive skin - incorporates emollients designed to make the epidermal layers of the skin softer and more pliable.
- Inline with the WHO Global Patient Safety campaign

Application / Exposure Times

- Hygienic hand disinfection¹ = 15 seconds
- Surgical hand disinfection² = 90 seconds

Accessories: Wall Brackets, Bed Brackets and Hand Pumps

Your 5 moments for Hand Hygiene

Clean hands are safer hands. **Are yours clean?**

According to WHO Global Patient Safety campaign: Clean Care is Safer Care.
For further information please see: www.who.int/gpsc/en/

When?

1	before touching a patient	When?	Clean your hands before touching a patient when approaching him/her.
		Why?	To protect the patient against harmful germs carried on your hands.
2	before clean/aseptic procedure	When?	Clean your hands immediately before performing a clean/aseptic procedure.
		Why?	To protect the patient against harmful germs, including the patient's own, from entering his/her body.
3	after body fluid exposure risk	When?	Clean your hands immediately after an exposure risk to body fluids (and after glove removal).
		Why?	To protect yourself and the health-care environment from harmful patient germs.
4	after touching a patient	When?	Clean your hands after touching a patient and her/his immediate surroundings, when leaving the patient's side.
		Why?	To protect yourself and the healthcare environment from harmful patient germs.
5	after touching patient surroundings	When?	Clean your hands after touching any object or furniture in the patient's immediate surroundings, when leaving – even if the patient has not been touched.
		Why?	To protect yourself and the healthcare environment from harmful patient germs.
